add support for Linux-VServer, an OS-Level virtualization similar to OVZ just more performant and stable (around for more than 4 years)

I will make this thread sticky, and if more than 10 people request for it, we will add support. Adding support is very trivial, but we need to know our demographic.

Thanks.

Yes it will be good to see hyperVM while managing VServer and maybe VMWare

This will improve your power in VPS field and maybe you will be the only 1. And additional income, doubled customer numbers etc...

For Vmware, we need to first reach an agreement with them to redistribute it, and there is also the matter of the console. Our first milestone at this point is windows on Xen, and then we will add vserver too. It seems, there are people who prefer Vserver's less intrusive virtualization.

Thanks.

I second vserver, Its one of the best virtualisation and least overhead software for virtualisation.

Most providers in germany use vserver for selling VMs.

EDIT : VM ware, nono, i dont see much use for VM ware, But yes Xen Windows sound tempting. Do u have any ETA for that?
and what about microsoft virtual machine? I thought ui were developing frontend for that in hypervm too.

Thanks.

Yeah... me too V-Server!

I am in Germany so I could join the rest of my mates in selling VServer VMs

Also, the Xen Windows OMG! Waiting for it

Support for VServer would indeed be nice, but for me, creation of windows Xen DomU would have my priority over VServer integration.

Yes Vserver is a must be. Imagine is OpenVZ stops the open source project or Xen just decides there will not be a free version anymore.

Vserver is the future.

Vserver has a serious issue. It needs modification of the applications.

Both openvz and xen are GPL licensed, and they will never stop being free. The companies are REQUIRED by GPL to open source any modifications they do to Linux Kernel.

I'd love to see VServer support as well.

I would also like to see support for Linux-Vserver, so here's my vote.

And I believe you have more than 10 votes now
