

Hello,  
i was changing the post file max size in the php.ini and i modded it into the file  
/usr/local/lxlabs/ext/php/etc/php.ini

Now the static site hosted on my vps is working, but if i try to connect to kloxoxo administration i get this error with strange words:

And if i try to connect to phpmyadmin i get the error "impossible load mysql extension".

First to make the mods on the php.ini it worked properly!

---

i replaced the php.ini with a new one getted from a fresh kloxo installation  
it works!
