i have server with xen
and i have iso
and i greated vps with windows-lxblank.img

what the next step
i want install win 2003 in xen

regards

read this one: http://wiki.lxcenter.org/HyperVM-Windows
allways firs try to serch the wiki or forums, then, if you can`t find what you need, create topic :).

bumping this thread.
i manage to install a blank vps with windows-lxblank.img
try to VNC but fail.

Network Error: could not connect to server: xxx.xxx.xxx.xxx:5905

Please write down a detail tutorial for installing windows.

or is it hyperVM can no longer install windows OS?

It woks fine under xen as long as your server supports it, you need to enable it in the BIOS of the server, if not it will not work.

What to do:
1- copy your ISO on the hypervm server @ /home
2- rename the ISO to wincd.img (you can also link it to /home/wincd.img)
3- go to the hypervm control panel and make a new VPS using the windows-lxblank.img
thats it now you can VNC to it in hypervm control panel (VNC does not work so good so use it to install then turn on remote desktop after you install it)

Have similar issue, i managed to boot up the win 2003 server but fail to connect to VNC via the vnc client on Hypervm. Error message could not connect to server : port 5903.

On the lxlabs tutorial never mention about this, so i expect this should be automatically configured. but i stuck in this phase.

any suggestion ?

iptables may be blocking the port.

[root@ZZZZZZZ bayu]# iptables -L
Chain INPUT (policy ACCEPT)
target prot opt source destination

Chain FORWARD (policy ACCEPT)
target prot opt source destination
ACCEPT all -- anywhere anywhere PHYSDEV match --physdev-in vifwin201

Chain OUTPUT (policy ACCEPT)
target prot opt source destination

it seem ok.

Here are my qemu log.

hi there,
please show your config for your windows vps.
