Hello!

In my error log I can always see this error:
[Mon Jul 09 15:59:55 2007] [warn] RSA server certificate wildcard CommonName (CN) `*.lxlabs.com' does NOT match server name!?

Where is a problem I have licence for LXadmin and now I don't know what to do.

Please help

YOu can change the certificate for lxadmin. Just replace /usr/local/lxlabs/lxadmin/etc/program.ca and program.pem with your own. It is not at all a license issue, merely a certificate issue.

Thanks.

Hello!

I change certificate, but in error log I still see this:

[warn] RSA server certificate wildcard CommonName (CN) `*.slohoster.com' does NOT match server name!?

How can I repair this, because error log is now blind.

Thanks
